Mateo Jaramillo

I'm an AI full stack developer: I build complete products, from the database to the interface, with agents and tests.

Summary

I'm Mateo Jaramillo, an AI full stack developer in Medellín, Colombia. I've spent more than five years building with React, Next.js and TypeScript. From 2021 to 2025 I worked at Sofka Technologies as a frontend developer, in agile teams. Since September 2025 I've worked as an independent contractor, building complete products: React and Next.js on the front, Python with FastAPI and Postgres on the back. One of them, Metales y Brillantes, an admin app for a jewelry store, has been in use for more than 18 months. I'm now building Prendo, a multi-tenant SaaS for compraventas, in development. I work with coding agents under rules: specs, decision records, tests and review gates, and nothing ships without my review. I'm looking for projects with a clear problem and someone on the other side who makes the decisions. I work in English and Spanish, in UTC-5.

Experience

AI Full Stack Developer, Freelance Sep 2025 - Present
Remote

- I'm building Prendo, a multi-tenant SaaS for compraventas, with FastAPI, Postgres and React: an insert-only cash ledger, stock derived from the kardex and review gates on every phase. It is in development.
- I built Metales y Brillantes, an admin app for a jewelry store, with Next.js and PostgreSQL: inventory, roles and reports. It has been in use for more than 18 months.
- I built the sites for Centro Estético ManuJ (Next.js, Supabase, built with Claude Code) and EcoExport Costa Rica (Next.js, next-intl, PDF spec sheets).
- For a last-mile logistics operator I analyzed how it records deliveries, built a prototype in Excel and built its public website.

Mid-Senior Frontend Developer, Sofka Technologies Aug 2021 - Aug 2025
Remote

- At Compensar I worked on Plataforma Bienestar, the workplace wellbeing platform Compensar offers to companies. I built frontend features in the Delta team, using Scrum, within a project of about 80 people.
- For SURA México I was the lead frontend developer of a web application built from scratch by a team of about 6 people. It centralizes the solutions agents offer and the record of what they generate, and it shipped to production successfully.
- I worked with React, TypeScript, Next.js, SCSS and Tailwind CSS, and in the last stage with AI coding tools such as GitHub Copilot.

Selected projects

Prendo
Multi-tenant SaaS for Colombian compraventas (pawn shops with a store), in development: cash, inventory and contracts that add up.

Centro Estético ManuJ centroesteticomanuj.com
Public site and management panel for a beauty salon: appointments, clients and finances in one place.

Arbitrage bot
Bot that screens second-hand listings with cheap steps first, uses Claude only on the survivors and sends alerts through Telegram.

Metales y Brillantes
Management app for a jewelry store: inventory, roles and reports, in use for more than 18 months.

Skills

Frontend	React, Next.js, TypeScript, Tailwind CSS, Css
Testing	Playwright
Backend	Python, FastAPI, Postgres, SQLAlchemy, Supabase
AI	Claude API, Apify
Tools	Claude Code, MCP, Subagentes y skills

Education

Telecommunications Engineering, Universidad de Antioquia
Completed through 8th semester

AI Coder: Complete Claude Code & Coding Agents Course, Udemy Nov 2026
Completed Nov 2026 · 16.5 h

FastAPI, Udemy
2025

Python Data Structures & Algorithms, Udemy
2025

Next.js, Udemy
2024

CSS, Udemy
2023
